

SmartLipo Now Offered at Laser and Vein Center of North Jersey: Dr. Philip Seaver Says Patients Enjoy Quick Results with Minimal Downtime

The Laser and Vein Center of North Jersey is now offering Smartlipo™ the latest technological advance in the removal of fat and the world's first and only laser-assisted lipolysis system. SmartLipo removes unwanted fat and tightens skin in a matter of minutes. Risks and complications are minimal compared with traditional liposuction.

Florham Park, NJ ([PRWeb](#)) December 11, 2008 -- The Laser and Vein Center of North Jersey is now offering Smartlipo™ the latest technological advance in the removal of fat and the world's first and only laser-assisted lipolysis system. SmartLipo removes unwanted fat and tightens skin in a matter of minutes. Risks and complications are minimal compared with traditional liposuction.

"If you have areas of fat that will not respond to diet and exercise, then you're a candidate for Smartlipo," says Philip Seaver, M.D., medical director. "Ideal candidates are in generally good health, with a reasonable body weight and have realistic expectations for the results."

Traditional liposuction has been performed for years to treat large areas of the body where fat deposits have accumulated. Recovery times of a week, two weeks or even more were common. With SmartLipo, what used to take weeks or even months of recovery now can have you back on your feet in a day or two! Utilizing the advancement of laser surgery technology, SmartLipo is a minimally-invasive procedure offering real benefits for liposuction patients. In addition to being less expensive than other liposuction treatments, SmartLipo patients have reduced recovery times, less discomfort, minimal health risks and see immediate results. It is the safest, least invasive surgical way to contour fat. Because general anesthesia is unnecessary, there are only minimal side effects.

SmartLipo can be used on practically any part of the body. In particular, SmartLipo is ideal for smaller areas of loose skin and stubborn fat such as the tummy, neck, face, lovehandles, arms and knees. SmartLipo can sculpt and tighten many areas of the body in a matter of minutes and permanently destroys fat cells, so repeat procedures on the same body part are unnecessary

Using a smaller-than-a-fine-point-pen fiber optic laser during the surgery allows for entry points in the skin that are inconspicuous. The laser wavelengths close down the blood vessels, not only minimizing surgical trauma but also greatly reducing bruising, swelling and recovery time. SmartLipo allows for more complete melting of the fat using advanced MultiPlex (MPX) laser techniques, in which two wavelengths of laser energy work to enhance sculpting of the fat and skin tightening.
